

Graduate Research Assistant Position

Where:

CiBER Lab
Dept. of Engineering Science
Simon Fraser University

www.ciber.ca

When:

Starting now.

What:

We are seeking graduate students interested in biomedical engineering. In particular the prospective student will be involved in the design, development, prototyping, and test of an innovative ambulatory device that could potentially save life of heart attack victims.

Skills Required:

The prospective student should have a strong background in electrical engineering with demonstrated experience in device prototyping and testing. Experience with biomedical devices and knowledge of human physiology will be an asset.

The student should be familiar with the LabView environment and standard laboratory equipment (DMMs, power supplies, soldering stations, etc.).
